

Setting up AWS Security Hub in a test environment

Setting up AWS Security Hub in a test environment using ***AWS Console***.

- Login to AWS account

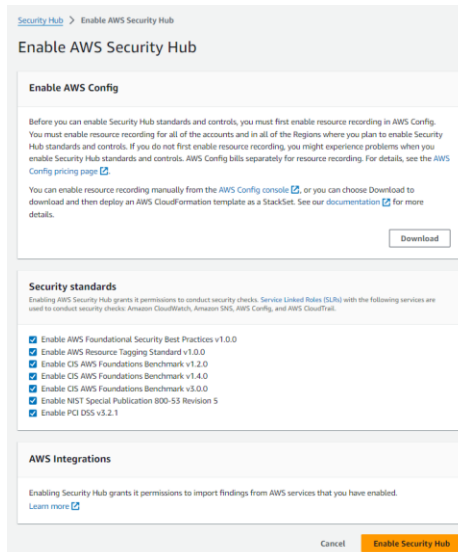

Step 1: Open the Security Hub Service page.

- After opening the security hub home page, click on **“Go to Security Hub”**.

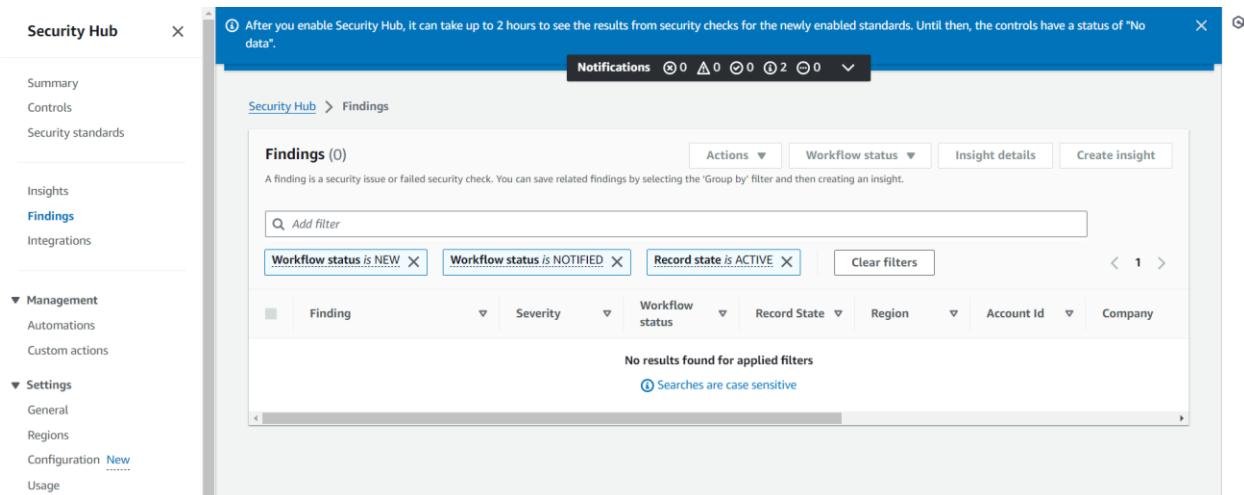

Step 2: Configure Security Hub Options.

- Choose Security standards based on which security checks will be performed, and then click on **“Enable Security Hub”**.

Step 3: View Findings.

- After enabling the security hub, it may take some time for Security Hub to collect and analyze data before presenting findings and then you can view issues in the **Findings** Tab.

For more detailed information on AWS Security Hub and its setup refer to the following link: <https://www.geeksforgeeks.org/how-to-set-up-aws-security-hub/>
